Impact Analytical now
ISO 9002 Registered

Impact Analytical, Midland, Mich. (www.impactanalytical.com) is now registered under ISO 9002:1994 standard. The Midland, Mich.-based testing laboratory achieved registration in November via Underwriters Laboratories.

Impact Analytical serves clients in pharmaceuticals, consumer packaging, automotive parts, household products and other industries. Since its beginning more than 25 years ago, it has developed special expertise in competitive product analysis, taste and odor analysis, additives analysis and identification of unknown material. Its staff offers clients 300 years of collective experience in analytical problem solving.

Sarah Diener, Impact's quality manager, said Impact management began the registration process in earnest three years ago.

"Registration lets our customers and prospects know that we are 'good to go.' This saves them time and money as there is no need for them to conduct an external audit of our procedures. ISO standards are internationally known and recognized."

Diener said Impact will transition to the ISO 9001:2000 standard within 18 months.
