## Impact Analytical to Exhibit at Thermoforming Conference

Impact Analytical will be among exhibitors at this year's conference of the Thermoforming Section of the Society of Plastic Engineers.

"Science off the Art" is the theme of this year's conference Sept. 15-17 in Nashville, Tenn. It is the Section's 12<sup>th</sup> annual conference. It is expected to be the largest single gathering of thermoformers in the United States this year.

Thermoforming is one of the ways by which thermoplastics are made into parts, big and small.

Impact has been serving the plastics industry for 25 years, especially in areas of additive identification, failure/fracture analysis, product deformation, taste and odor analysis, and other analytical areas of concern throughout the industry.

The Nashville Convention Center is the venue this year. Impact will welcome attendees at exhibit #122.
